

Code Library™

Tailor Laserfiche® to Your Organization's Specific Business Needs

- Add New Functionality to Your Laserfiche System
- Integrate Custom Applications with Your Document Repository
- Benefit from the Expertise of Other Laserfiche Developers

The Integrator's Toolkit™ contains commands and documentation that help you use the Laserfiche® application programming interface most effectively. Two online resources help you maximize the value of your Toolkit investment: the Toolkit Forum, where you can engage in discussions with Laserfiche Software Engineers and other application developers; and the Code Library™, which serves as a central repository for the collective knowledge of the extended Laserfiche developer community.

Streamline Processes and Automate Everyday Tasks

The Code Library includes a variety of scripts, utilities and custom applications designed to automate common tasks and add functionality to your Laserfiche system. Some items, such as a program that automatically locates and processes documents that have not yet undergone OCR, function as stand-alone utilities that you can download and implement at your organization. Other items serve as educational resources and describe how to add Laserfiche functionality to your own applications. For example, you'll find sample code that enables a custom application to automatically log in to the Laserfiche Server™ or search for documents in the Laserfiche repository. You'll also find code that you can use to monitor the repository for specified events, which is useful if you need to configure an application to perform certain actions based on what occurs in Laserfiche.

Quickly Implement New Functionality

In addition to the code itself, each entry in the Library contains implementation instructions and, in many cases, suggestions for further modifications. Each entry also details the programming language used (typically C# or Visual Basic®.NET), the version of the Laserfiche Server the entry's compatible with and the specific Laserfiche modules it interacts with.

Collaborate with Other Laserfiche Developers

We actively encourage IT personnel and other developers to contribute code to the Library, and to ask questions and post comments about specific items. Laserfiche Software Engineers typically respond to these questions, and you can sign up for automatic e-mail notification whenever someone posts a comment related to a particular entry. You can also rate items in the Library and review other users' ratings.

Code Library Highlights

- Download scripts, utilities and code samples that automate Laserfiche-related tasks and enable custom applications to communicate with the Laserfiche Client™ and Server.
- Ask questions or post comments about particular entries. You can rate entries as well.
- Find detailed instructions and other useful information written by the entry's developer.
- Search for entries by keyword, or quickly sort all the Library's items either by rating or by date.

The Next Step: Please call (800) 985-8533 or e-mail info@laserfiche.com for more information.
